Workshop Registration

Energy efficiency is a major component of green building. When surveyed, consumers said that energy-efficient features are the most important upgrade in a new home and most are willing to pay more for these features. ENERGY STAR offers a prepackaged program to support builders in meeting energy efficiency criteria in the Built Green™ and LEED-Homes green building standards.

The workshop will provide you with an introduction to Northwest ENERGY STAR Homes and the “House as a System” approach based on building science. Learn how to design and build homes that offer your customers improved savings, comfort and value.

Workshop Agenda

7:30 – 8:00 am	Registration & Continental Breakfast
8:00 – 8:15	I. Welcome & Introductions
